History AutoCAD debuted on December 6, 1982, as the first desktop application for a 32-bit, 16-color personal computer platform. The new AutoCAD proved very popular and was one of the early software products to appear on the PC. This software marked the beginning of a new era for the design and drafting professions. Prior to AutoCAD, design professionals had to use proprietary drawing programs, large mainframe computers, or drawing on their own paper. With AutoCAD, users could design on their own computer, sharing information instantly over the worldwide Internet. Starting with AutoCAD 2.0, computers sold in the United States included the "Super VGA", an extended version of VGA graphics. AutoCAD 2.5 added the ability to connect to a network and automatically update to the latest software. New features included stencils, image editing tools, and the ability to save DWG files. AutoCAD 2.6 introduced the ability to print directly to a laser printer. AutoCAD 2007 introduced the "vector" feature, a web standard designed by Microsoft and adopted by AutoCAD, enabling vectors, which are 2-D digital objects, to be viewed, edited, and shared in a web browser. AutoCAD also introduced cloud-based drawing and file editing and annotation. In 2013, Autodesk introduced AutoCAD LT, AutoCAD for AutoCAD 2.0 users. AutoCAD LT is a 64-bit version of AutoCAD. It includes new design and drawing tools, including object snap, path commands, and drafting grids. It also includes a drawing template system, which helps users to be more productive by providing one-click tools to convert a drawing into a template. AutoCAD LT includes a toolbox that contains 150+ drawing and plotting tools. AutoCAD LT was also the first version to use a web browser as the primary interface to the software. AutoCAD LT supports Microsoft Windows, Apple Macintosh and Linux. In 2014, Autodesk released AutoCAD R2018, which introduced cloud-based drawing and annotation. In 2018, Autodesk released AutoCAD R2019, an update to R2018 that introduced cloud-based drawing and annotation. Components and features AutoCAD is a CAD program that features numerous features for design, editing, and rendering. It also contains over 70 drawing and layout tools

Developer support Autodesk runs a special programming forum for developers to access information regarding AutoCAD and other Autodesk products, including how to develop software for the company. Autodesk University is a training service run by Autodesk providing one- and two-day online courses for CAD and related software. Since August 2014, Autodesk offers the Autodesk University Certified Associate (AUCA) program for students to earn the AUCA designation. The AUCA program is also available to current employees. In August 2016 Autodesk announced its plan to open its own University Campus in the Philippines. Autodesk University Campus Manila offers in-person classes and online courses. In November 2017, Autodesk announced that it plans to open its own University Campus in Israel to offer online and in-person courses. In June 2018, Autodesk announced the launch of Autodesk University (formerly Autodesk University Campus), an online learning and certification program. Autodesk University is part of Autodesk's portfolio of educational services. In August 2018, Autodesk announced the launch of the Autodesk University Singapore Campus in Singapore. The campus will offer one- and two-day classes that are located in the city's business district. Autodesk University (formerly Autodesk University Campus) was announced in September 2018 as the top prize winner of the 27th Annual GeekWire Innovation Awards. The Campus is now known as Autodesk University in the Philippines. Autodesk University is currently offering its Certified Autodesk Architect (CAA), Certified Autodesk Civil 3D (CAC3D), Certified Autodesk Civil 3D (CAC3D Architectural), Certified Autodesk Certified Associate (CACM), Certified Autodesk Certified Technician (CACT), Certified Autodesk Certified Surveyor (CACS), Certified Autodesk Certified Technician (CACX) and Certified Autodesk Certified Manager (CACM) programs. The Autodesk University website lists further certifications which are available through the school, including the following: Autodesk Certified Architect (ACA) Autodesk Certified Landscape Architect (ALA) Autodesk Certified Landscape Designer (ALD) Autodesk Certified Landscape Architectural Technician (ALAT) Autodesk Certified Landscape Architectural Technician (ALAT) Autodesk Certified Landscape Architect a1d647c40b

A: When using Autodesk's 360 apps you need to enable a key. You have to open the preferences and scroll down to the section 'Default Keys' and the key 'z'. In the left column 'Select Action' you can scroll down to 'Use key'. Check the box. The key will show in the viewport and you'll be able to use it as you would a standard key.

What's New in the AutoCAD?

Support for the new Markup Assist function: Specify the type of markup desired and the AutoCAD 2023 graphical user interface will display suggested code snippets that can be quickly added to the drawing. AutoCAD will even automatically apply the suggested code snippets to the selected part of the drawing. (video: 1:29 min.) "Snap to Grid" and "Snap to Grid Extents" are enhanced to do what they were designed to do: Dynamically correct to the nearest Grid. Snap to Grid Extents automatically place the line at the extents of the grid. The Grid-Snap feature now snaps to only the Grid lines, not to the more-obscure, invisible, co-incidental details of the drawing that the user has modified for layout. Improved support for Endmill tools: Edge tools can now be used on an Endmill tool. When a tool is used on an Endmill it can be used only on milling objects, not for other types of editing. Edge tools can be used when a circularity effect is enabled. The Edge tool's Auto Select command now remembers how the edge was selected in the previous Auto Select session. Improved text tool precision: The current text box can be selected. The text cursor is now automatically moved to the current text box. Auto Correct the text tool cursor if it moves out of the text box. User-defined text can now be edited using the text box cursor. The option "Hide Tool Tips" no longer dims the text tool cursor. Faster Edit, Edit, and Switch tools: Better multithread performance. Improved cursor snapping performance. Support for multithreaded editing in small applications. Improved ability to edit using just the keyboard. Improvements to Display Options (0): Font selection order is now remembered and displayed on the Font tab of the View Menu. Hairline and Anti-Aliasing controls are now displayed on the Display Options dialog box. The gray scale and fill color options are displayed on the Display Options dialog box. Improved Command Dialog Box (0): Command and modifier key options can be specified using a dialog box that is linked to the appropriate drawing or command dialog box.
