I have a SQL query that has two fields and I am trying to do a sum: SELECT .... SUM(case when field1 like '%field2%' THEN 1 end) as 'field3', SUM(case when field1 like '%field2%' THEN 2 end) as 'field4', SUM(case when field1 like '%field2%' THEN 4 end) as 'field5' FROM Table1 Basically, I want to SUM only if field1 has a 'like' of field2. If field1 does not have a 'like' of

run selected: System Windows NT/2000/XP/Vista/7 32 or 64-bit 32 or 64-bit Copying for 32 or 64-bit. Unpack the files. Run the installer and follow the instructions. 32 and 64-bit. How to install on Windows 10 Q: Trying to get better handle on the difference between upper and lower case letters Apologies for the newbie question. On my website, where a user enters a search term, I have a function to check the prefix of the word they typed against an array of keywords in my database, and return a best match. So I have to do the following: If the user typed... Search term: SU Index of term in database: SUER Return prefix: SU If the user typed... Search term: beer Index of term in database: beer Return prefix: beer If the user typed... Search term: su Index of term in database: su Return prefix: su If the user typed... Search term: su Index of term in database: su Return prefix: su Search term: eb Index of term in database: ELBER Return prefix: EB etc. The code for the function is below, and is written in PHP, but I don't think this is the problem. /** * Corrects user-entered search queries to ensure they have the * right amount of letters. * * @param string $searchTerm * @return string */ private function correctWord($searchTerm) { // Remove anything less than 3 or more than 4 characters $searchTerm = preg_replace("/\s\s+/", " ", $searchTerm); $searchTerm = trim($searchTerm); if ($searchTerm prefix(2, $searchTerm); } if ($searchTerm > 4) { $searchTerm = $this->prefix(3, $searchTerm); } return $searchTerm; } This works a treat, except it only looks for two letters. 3da54e8ca3
