The inhibition of these functions by serum factors can be reversed by addition of the serum factor(s) during enrichment and expansion of the CSC-enriched MCTS. While our preliminary results are very encouraging, several limitations have to be acknowledged. The observed effects of serum factors on CSCs might be limited by the ability of factors to pass the Transwell® membrane and thus affect CSC functions within the spheroid. However, with our method of serum enrichment and/or expansion, the medium is outside of the spheroid. Furthermore, the effect of serum might be different with the concentration of medium components a1d647c40b

I have a new product, but it's still very new. It's called Neom. It's a new 3D printer that uses resin instead of plastic. In my opinion, resin is the best alternative for 3D printing. I have successfully printed quite a bit of stuff that I have made in the past. It's printed very quickly, is mostly translucent (I use a nice light blue) and can be printed with a great variety of materials. It's my first project at Mr. Geek's. I have been looking around, but it seems that Mr. Geek's doesn't really care about custom 3D printer service. I do a lot of cool stuff that people ask for, but he is very unhelpful. I was gonna ask his permission to post this video on Youtube, but it seems that he is taking a break from Youtube for whatever reason.
