An overview of the relation between executive functioning, daily functioning, and social communication of elderly inpatients. In recent years, the number of elderly patients admitted to hospital has been on the rise. The need for rehabilitation and social care in this age group has also risen. There is a small body of evidence that executive deficits in the elderly are closely related to cognitive impairment, but there has been little research focusing on communication and daily living skills of the elderly. The purpose of this study was to examine the relationship between the executive functioning abilities of elderly inpatients and daily living skills and social communication,
